

WATTSAN 6040 ST

The **Wattsan 6040 ST** laser machine is an advanced medium format model for laser cutting and engraving of non-metallic materials.

Wattsan 6040 ST is suitable for mass production and hobby. We design machines to meet the demands of our customers.

Cutting: wood, plywood, cardboard, paper, plastics, plexiglass (acrylic), leather, fabric, fur, PET, MDF, rubber, paronite, foam rubber

Engraving: wood, plywood, cardboard, plastics, rubber, leather, fabric, fur, plexiglass (acrylic), PET, MDF, glass, stone etc.

Product parameters

Model	6040 ST
Brand	Wattsan
Laser type	Sealed CO2 laser tube
Application	Cutting, engraving
Warranty	1 year
Dimensions	
Working area	600 * 400 mm
Machine size (L * W * H)	765 mm * 1165 mm * 600 mm
Packing size	860 * 1250 * 790 mm
Weight	121 kg
Optics	
Laser power	80-90 W
Max. cutting thickness (wood)	7-8 mm
Diameter of mirrors	25 mm
ZnSe lens	18 mm
Focal length	38 mm
Laser tube life	7500 h

Mechanics

Table model	Lamels
Lifting table	Yes, manual
Lowering depth of the work table	200 mm
Control system	Ruida RDC 6445G
Cutting speed	0-500 mm/s
Engraving speed	0-700 mm/s
Cooling	Water
Electric power supply	220V
Power consumption	740
Through table	Yes (Y-axis)
Y-axis structure	Linear guide AMT PMI MSB 15S
X-axis structure	Linear guide AMT PMI MSB 15S
Engine on X	57-H350B
Engine Y	57-H350CS / SH (2 shafts)

Sphere of application

Souvenir industry, decor, light and heavy industry, funeral services, prototyping and much more. Laser cutting machines are used as stand-alone devices and in combination with other machines, as well as auxiliary equipment for production.

Lifting table

The lifting table allows the use of a rotary device. Due to the rare use of the rotary device, the machine is equipped with a manual lowering of the table. At the request of the client, the lift of the table can be automated.

Table height adjustment **200mm**

Advantages:

Strengthened portal

the wall thickness of the aluminum pipe is 5mm, even at maximum speed you will get a perfect engraving.

Ruida 6445G

the most widely used laser control system in the world. The new modification has an enlarged display.

Through table

the most important advantage of our machine is its ability to work with unlimited lengths of material. The design of the equipment allows you to remove the front wall and use it for cutting free space.

PMI rails

guarantee high accuracy throughout the entire service life of the machine. It is the most widely used brand in the whole world.

Frame construction

the uniqueness of all Wattsan laser machines is the presence of a frame structure, this increases the weight of the machine and eliminates vibrations even at high speeds.

Three Phase Stepper Motors

They are characterized by increased accuracy and reliability, as well as provide a smaller step when engraving.

Unique cutting head

We design our machines with universal cutting heads with wide and narrow nozzles. The wide nozzle blows away combustion residues and promotes better engraving. The laser head is designed for use with lenses with different focal lengths.

All machine tool upgrades are aimed at improving the end result, taking into account the opinions of customers. The products obtained in Wattsan machines do not require additional processing. We consider many factors so that our customers can get the best quality products at a lower cost. Each laser machine is designed to work 24/7.

Processable materials:

Laser machine Wattsan 6040 ST is designed for cutting and engraving on a wide range of materials. Our task is not only to choose the right machine, but also to describe the specifics of processing all materials.

Plywood

Fabric

Rubber

Plastic

Wood

Leather

Acrylic

Ceramic tile

Crystal jade

Bamboo products

Granite

Marble

Resin

Cardboard

Paper

Fur

PET

MDF

Paronite

Foam rubber

Training to work on the machine

Our machines are used all over the world with a huge variety of materials.

We are constantly gaining experience and will advise not only how to choose the optimal parameters for work, but also help to organize production.

If you have any questions about working with any material or your vector, our manager will send you a video of working with it!

We send the machine with a instruction book, thanks to which you can start the machine yourself.

We communicate using a video call and explain how to start the machine yourself.

An engineer from China arrives to you and gives training on how to work with the machine.

The nearest dealer (may be from the same or a neighboring country) will arrive to you and give instructions.

We are improving our equipment so that you get the best!

In order to use our machines all over the world, for customers, we make them as reliable as possible and select the most popular consumables.

Durability

In order to use our machines all over the world, for customers, we make them as reliable as possible and select the most popular consumables.

Development

The development department designs the machines so that they are suitable for all areas of production. Wattsan machines are designed to work in a 24/7 mode.

Training

Wattsan has developed and is constantly improving a support system, training for customers and partners, which allows you to start using the equipment in a short time, avoid simple mistakes and get an immediate response from the service department.

Quality

We use modern high-precision equipment for the assembly of machine tools. This is a guarantee of the highest rate of accuracy of machines throughout the entire life of the equipment.

Exhibition

Certificates

When choosing components for our machines, we not only select the best components, but also control their availability in other countries for quick service by our customers or service engineers around the world.

 Dealer

 Service

We will show the machine in On-line mode

Our employees will conduct a demonstration of the machine on-line or send you a video of cutting (engraving) your material according to your layout. If necessary, service engineers will resolve most of the issues that arise using video communication.
