## WATTSAN 0503

The Wattsan 0503 laser machine is a desktop laser machine for cutting and engraving non-metallic materials. Designed to work 24/7.

Wattsan 0503 is suitable for mass production and hobby. We design machines to meet the demands of our customers.

Cutting: wood, plywood, cardboard, paper,

plastics, plexiglass (acrylic), leather, fabric, fur, PET, MDF, rubber,

paronite, foam rubber

Engraving: wood, plywood, cardboard,

plastics, rubber, leather, fabric, fur, plexiglass (acrylic), PET, MDF, glass,

stone etc.

1040mm

# **Product parameters**

Model	0503
Brand	Wattsan
Laser type	Sealed CO2 laser tube
Application	Cutting, engraving
Warranty	1 year
Dimensions	
Working area	500 * 300 mm
Machine size (L * W * H)	650 mm * 1040 mm * 575 mm
Packing size	765 * 1140 * 710 mm
Weight	104 kg
Optics	
Laser power	60W
Max. cutting thickness (wood)	5-6 mm
Diameter of mirrors	25 mm
ZnSe lens	18 mm
Focal length	38 mm
Laser tube life	7000 h

## Sphere of application

Souvenir industry, decor, light and heavy industry, funeral services, prototyping and much more. Laser cutting machines are used as stand-alone devices and in combination with other machines, as well as auxiliary equipment for production.

## Lifting table

The lifting table allows the use of a rotary device. Due to the rare use of the rotary device, the machine is equipped with a manual lowering system of the table. At the request of the client, the lift of the table can be automated.

## Advantages:

Strengthened portal the wall thickness of the aluminum pipe is 5mm, even at maximum speed you will get a perfect engraving.

Ruida 6445G the most widely used laser control system in the world. The new modification has an enlarged display.

Belt gear reducer and 3M belt
has an increased service life due to the size
of the tooth, and also excludes the coin
cut due to special materials.
Relieves stress on stepper motors,
extending their service life.

Frame construction
the uniqueness of all Wattsan laser
machines is the presence of a frame
structure, this increases the weight of the
machine and eliminates vibrations even
at high speeds.

PMI rails
guarantee high accuracy throughout
the entire service life of the machine.
It is the most widely used brand in
the whole world.

Three Phase Stepper Motors
They are characterized by
increased accuracy and reliability,
as well as provide a smaller step
when engraving.

Unique cutting head

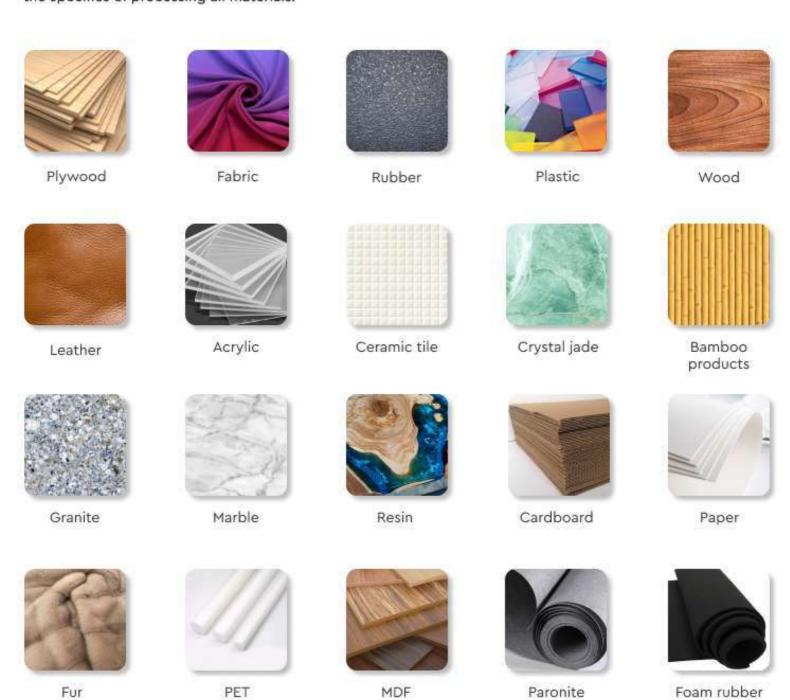

We design our machines with universal cutting heads with wide and narrow nozzles. The wide nozzle blows away combustion residues and promotes better engraving. The laser head is designed for use with lenses with different focal lengths.

All machine tool upgrades are aimed at improving the end result, taking into account the opinions of customers. The products obtained in Wattsan machines do not require additional processing. We consider many factors so that our customers can get the best quality products at a lower cost. Each laser machine is designed to work 24/7.

## Processable materials:

Laser machine Wattsan 0503 is designed for cutting and engraving on a wide range of materials. Our task is not only to choose the right machine, but also to describe the specifics of processing all materials.

## Training to work on the machine

Our machines are used all over the world with a huge

We are constantly gaining experience and will advise not only how to choose the optimal parameters for work, but also help to organize production.

If you have any questions about working with any material or your vector, our manager will send you a video of working with it!

We communicate using a video call and explain how to start the machine yourself.

An engineer from China arrives to you and gives training on how to work with the machine.

The nearest dealer (may be from the same or a neighboring country) will arrive to you and give instructions.

We send the machine with a instruction book, thanks to which you can start the machine yourself.

# We are improving our equipment so that you get the best!

70 engineers

In order to use our machines all over the world, for customers, we make them as reliable as possible and select the most popular consumables.

43000 factory area 24/7 communication

## Well-organized processes at all stages

### Durability

In order to use our machines all over the world, for customers, we make them as reliable as possible and select the most popular consumables.

#### Development

The development department designs the machines so that they are suitable for all areas of production. Wattsan machines are designed to work in a 24/7 mode.

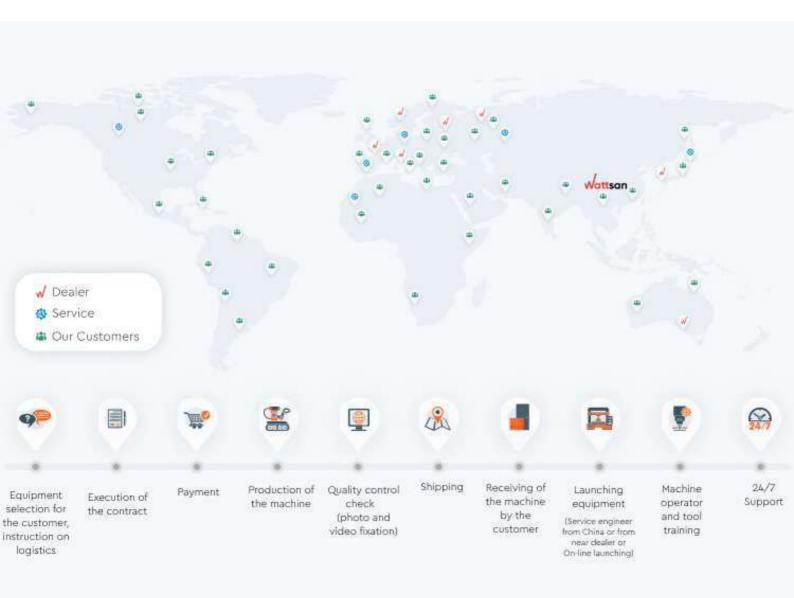

#### Training

Wattsan has developed and is constantly improving a support system, training for customers and partners, which allows you to start using the equipment in a short time, avoid simple mistakes and get an immediate response from the service department.

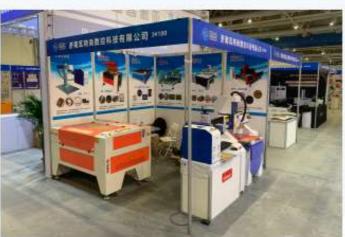

#### Quality

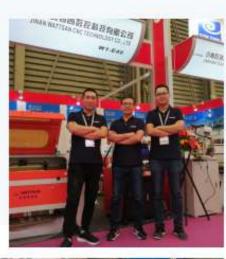

We use modern highprecision equipment for the assembly of machine tools. This is a guarantee of the highest rate of accuracy of machines throughout the entire life of the equipment.

# **Exhibition**

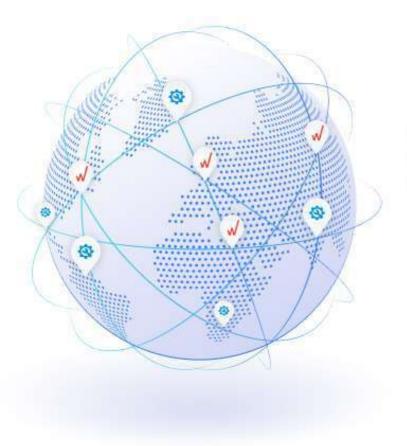

# Certificates

When choosing components for our machines, we not only select the best components, but also control their availability in other countries for quick service by our customers or service engineers around the world.

## We will show the machine in On-line mode

Our employees will conduct a demonstration of the machine on-line or send you a video of cutting (engraving) your material according to your layout If necessary, service engineers will resolve most of the issues that arise using video communication.
